Introduction to lisfi.in

Your Blueprint for Diagnostic Excellence

Lisfi.in is a professional, cloud-native LIMS designed to optimize laboratory workflows through a secure and scalable web-based platform. By eliminating the need for complex on-site installations, it provides seamless cross-device accessibility, allowing teams to manage everything from walk-in billing to corporate accounts with ease. This intuitive solution reduces operational friction, ensuring laboratories can prioritize patient care through a streamlined, high-performance management experience.

Que system for sample tracking

This feature tracks samples in real time from the exact moment of collection down to the final report generation. It provides laboratory technicians with total visibility into the workflow, effectively eliminating operational bottlenecks.

Critical Value & High/Low Level Management

This module automatically monitors test results and triggers instant alerts the moment parameters breach safe clinical limits. It immediately flags and isolates highly abnormal, life-threatening values to prevent human error or missed panic data.

Inventory consumption based on billing

This system automatically calculates and deducts reagents and consumables the moment a test is billed. This prevents unexpected shortages of critical laboratory kits during busy operational hours.

Main Lab & branch connectivity

This feature unifies multi-center operations by linking all branches to the main laboratory hub. It allows for centralized data management and real-time monitoring of network-wide activities from a single dashboard.

Analyzer Interface

This module establishes a direct, secure bidirectional communication link between analyzer and the software. It automatically transfers test requests to the machines and fetches the generated results without human intervention.

Integrated Payment Gateway

This universal billing integration enables swift, secure digital transactions across all major payment options, including GPay, PhonePe, Paytm, etc. Patients can seamlessly pay using credit cards, debit cards, or instant UPI QR codes.

Barcode Facility

This facility automates sample identification by generating and scanning unique barcodes at the point of collection. Each barcode links the physical sample tube directly to the patient's electronic medical record inside the database.

Financial & Accounting Suite (P&L, Trial Balance, & Balance Sheet)

This module automatically generates real-time Profit and Loss statements, Trial Balances, and Balance Sheets. It tracks daily laboratory revenue against operational costs, keeping your general ledger perfectly synchronized.

Dedicated Options for Account Management

This financial panel is designed to manage corporate clients, referral doctor structures, and B2B accounts. It allows the lab to set up custom billing tariffs, credit limits, and specialized discount structures for partners.

Corporate Billing

This feature simplifies the management of corporate clients, referral doctor commissions, and B2B credit accounts. It allows the laboratory to set up custom billing tariffs, automate outstanding balance tracking, and generate periodic invoices effortlessly.

Referral Lab Management

This management tool simplifies the entire outsourcing workflow for specialized tests that are sent to external laboratories.
It tracks the movement of referred samples, manages external logistics, and controls corresponding partner pricing structures.

Result through WhatsApp/ SMS/Email/Web Portal

This module maximizes patient convenience by automating report distribution across popular digital channels. When a report is authorized. the system sends a secure, download-ready link directly to the patient as PDF reports.

Live Feedback Option for Patients

This interactive feature empowers patients to rate and comment on their service experience immediately after their visit.
It helps diagnostic centers maintain high service standards and build long-term loyalty with their patients.

Detailed Patient Result Trend Analysis Chart

This feature provides a visual graph that plots a patient's historical test data over time.
It allows doctors to effortlessly track the progression of a chronic illness or monitor a patient's recovery phase.

Customised Lab Reports

This dynamic layout designer allows laboratories to easily modify, format, & style patient test reports to match their branding.
It supports personalized letterheads, digital signatures, colored reference intervals, and custom tabular or graphical summaries.

Prescription Scan & Attachment

The software allows the front-desk team to instantly scan and digitize physical doctor prescriptions during registration. The digital copy is permanently attached to the patient's digital profile for easy access by laboratory technicians.

Automatic Result Authorization

This module speeds up the daily reporting workflow by automatically validating and releasing routine, normal test results. By instantly clearing the standard workload, it reduces manual data verification fatigue across the department.

QR Code for Result Authenticity

This feature automatically prints a secure, unique QR code on every patient report to prevent data tampering. Doctors or third parties can quickly scan the code to instantly verify the report's authenticity against the cloud database.

NABL/QCI Packages Available

This clinical compliance module provides pre-configured testing packages which automates mandatory quality control documentation, internal audits, and traceability protocols required for international accreditations.

Self Result Printing KIOSK

This touch-screen terminal integration allows patients to securely print their own test reports directly in the lab waiting area. By simply scanning a personal barcode receipt or entering a secure UID code, the system pulls the authorized files from the cloud database.

lisfi.in Editions

That fits your needs

lisfi.in Silver

The Silver edition provides a reliable, easy-to-use foundation for laboratories focused on digitizing their daily routine. It covers all the core necessities, from patient registration to secure report generation, ensuring your lab operates with speed and accuracy. This version is the perfect cost-effective choice for those who want a straightforward, dependable system without unnecessary complexity.

lisfi.in Gold

The Gold edition is built for labs looking to increase productivity through automation and deeper insights. It introduces advanced reporting and smoother instrument integration to help you manage higher volumes with ease. By reducing manual tasks and offering faster support, this version empowers growing labs to deliver quicker results and make better data-driven decisions.

lisfi.in Platinum

The Platinum edition is our most powerful tier, designed for large-scale operations and multi-center diagnostic chains. It offers a fully customizable experience with elite security, AI-driven analytics, and a dedicated success manager for 24/7 support. This is the ultimate choice for laboratories that require a bespoke, high-performance system to manage every detail of their complex enterprise.

lisfi.in Lite

LISFI Lite is an entry-level solution designed for small clinics and collection centers that need a quick and easy way to manage reports. This version focuses on the absolute basics-patient entry, bill generation, and printing results-without any complicated setup. It is the most affordable way to move from paper to digital, ensuring your small lab stays organized and professional from day one.
